Standard Engineering Ltd.

Quality comes as Standard

Machinery maintenance is something we all tend to overlook, until our machine is suddenly not working and your customers are waiting for their shoes!

Health & Safety Benefits of good maintenance

Replace filter bags on finishers and Bandscourers every 12-18 months to ensure extraction is at optimum. Your shop is less dusty, and you are breathing in less leather and rubber!

Make sure you use the bag shaker during the day and empty the dust tray every night.

Ensure cutters are sharp prevent wear on motors by pressing too hard, and of course, to make sure the repaired work looks its best.

Keep rear pulleys and contact wheels clean of build-up to help ensure scouring band noise to a minimum.

Make sure your finisher is correctly wired into your electricity supply. If you are using a 3-pin domestic plug we strongly suggest you seek advice from us!

**Do you need a spare part for your
Whitfield - Hardo - Power machinery?**

**Call us on 01536 486 106 to gain access to the
largest spares department in the UK**
