720

The latest addition to the Standard finisher range is the Model 720 finisher. This machine allies improved design, more effective dust management and larger scouring and trimming areas based on the tried and trusted 700 type design. A host of optional extras are available to bespoke this machine to your requirements.

"720 and Air-Flo Pressbench"

**Air-Flo
Pressbench
can be fitted
with flash
activator**

The latest machinery development from Standard is the "Air-Flo" range of pressbenches and workstations. These offer the discrete filtering of much of the chemical fumes from the application of adhesives.

Standard's "Air-Flo" technology takes away glue vapours and returns fresh air to the atmosphere via a filter system that you and your customers will be breathing.

The innovative "Air-Flo" system draws the vapours into the bench unit, filters them, and returns cleaned air back to the work space.

Standard Engineering Ltd.

“The Maxi-Flo Unit”

Our latest machinery developments include the “Air-Flo” range of benches and workstations.
